

TO ENSURE GOOD PAPER TRANSPORTATION.
THE PAPER LINER.

DISCOVER THE FLEXIBILITY OF A FIRM POSITION: THE PAPER LINER EQUIPMENT IS TAILORED TO ALL REQUIREMENTS OF PAPER ROLL TRANSPORTATION. AND MORE THAN THAT: AS WITH EVERY GENUINE KRONE TRAILER, ITS SAFETY IS CERTIFIED REGARDLESS OF ITS LOAD TYPE.

Here, paper is the star.

The Paper Liner stability.

Paper is a heavy load with special requirements. A trailer that transports paper must meet these special requirements. The KRONE Paper Liner is a tailored solution. The solid base of the Paper Liner consists of the newly developed KRONE chassis with short transverse beam spacing, additional braces in the chassis just before the rear and durable roller wedge rails made of steel, which do not bend even if the load is unevenly distributed.

The right equipment – guaranteed!

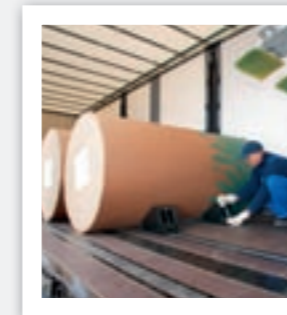

The loading equipment.

Particularly efficient for transporting paper: due to its numerous strapping points, the KRONE Multi Lock external frame offers unlimited load securing options. In addition, four running rails (integrated in the floor) for pallet rollers and eight perforated rails in longitudinal direction provide optimum loading possibilities.

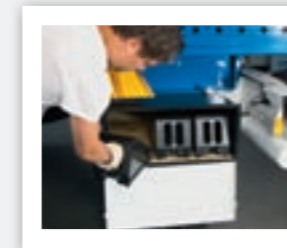

PAPER LINER. PRODUCT FEATURES.

The load securing equipment for paper rolls.
 In combination with steel running rails, which are embedded in the compartment floor from the front to the rear, the Multi Lock external frame offers numerous strapping points for universal load securing of paper rolls.

Versatile roll stability.
 Four rows of running rails for paper rollers with wedge-type perforated rails secure rolls in any variation.

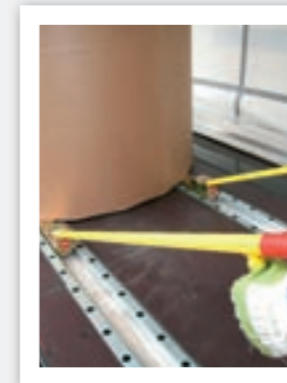

Standard stow box.
 The transverse stow box under the rear offers enough space for optional accessories such as spindle wedges or paper rollers.

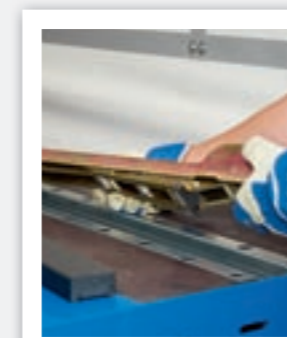

Robust chassis.
 The extraordinary stability of the chassis with a fork lift axle load of seven tons shows itself at its best primarily in quick loading/unloading cycles.

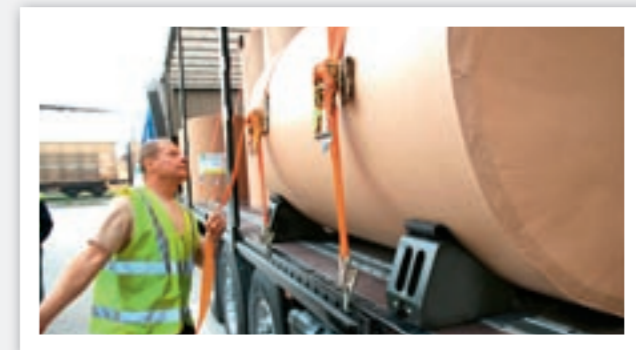

Excellent paper roll securing.
 Due to its numerous strapping points, the Multi Lock external frame offers universal securing possibilities, particularly when loading paper rolls.

Smooth running rails.
 Steel running rails in combination with pallet rollers make it possible to shift the paper rolls without much effort. The rising height of 20 mm is designed even for putting anti-slip mats under the rolls.

Pallet rollers.
 Krone can provide original Joloda pallet rollers with a load capacity of 2.5 or 3.5 tons and a rising height of 13 or 20 mm. Upon request, the lining slats made of recycled plastic can be placed into the plank sockets of the superstructure to save space.

Optional securing equipment.
 Spindle wedges, anti-slip mats, and strapping belts for the Paper Liner are available to make the paper rolls even more secure.
